Privest Wireless Key Switch

With the Privest Wireless Key Switch, you can arm and disarm your Privest wireless alarm system. A simple turn of the key replaces the entering of a PIN code. This allows you to operate your system more quickly and more conveniently.
The cylinder guard collar, the high–quality cylinder made by ABUS and a rugged, weather–resistant housing (IP 55) protect the key switch from outside influences.
The Privest Wireless Key Switch is designed for a half cylinder (10/30) and is protected against tampering by a wall contact and a lid
contact.

Product highlights:

- Easy arming and disarming without entering PIN code
- Tampering protected by lid contact, wall contact and cylinder guard
- Integrated LEDs for transmission and status display
- For indoors and protected outdoor areas, protection class IP55
- For on–wall mounting
